```

Day 1: Passport (Reflection Questions)

```
day1_passport.py > ...
58
59 # 🗨 Reflection Questions:
60
61 # What did you build today?
62 # I built a fun digital passport that includes personalized inputs like my favorite skincare brand and favorite movie.
63
64 # What was challenging?
65 # Understanding how to replace input statements with fixed answers and figuring out why certain text appeared red or green
66 # in GitHub was a bit confusing at first.
67
68 # What was fun?
69 # Customizing the code to reflect my personal interests and seeing my edits live in the preview was really enjoyable!
70
71 # What would you add next?
72 # I'd add more personalized sections like favorite color, dream vacation spot, or maybe even include an image or link to a
73 # playlist.
74
75 # CHALLENGE: Add at least 2 more sections below!
76 # For example: favorite snack, favorite animal, favorite song, etc.
```

```

Day 2: Code Island Juice Bar (Reflection Questions)

🔗 day2_passport.py > ...

```
145 # 🗨️ Reflection Questions
146
147 # What did you build today?
148 # I built a Juice Bar Recommender that asks users about their mood, favorite fruit, sweetness preference, and toppings to
149 # create a personalized smoothie recommendation. It also includes a VIP code for mystery drinks and prints a fun receipt.
150
151 # What was challenging?
152 # The most challenging part was implementing the conditional logic to handle different moods, sweet preferences, and
153 # special cases like the VIP code and unusual fruit inputs. Also, making sure the random selection worked smoothly.
154
155 # What was fun?
156 # Creating fun and creative drink names with emojis and adding the secret VIP mystery drink made the project enjoyable and
157 # interactive.
158
159 # What would you add next?
160 # I would add the ability for users to build their own drink by selecting multiple ingredients and maybe include a loop to
161 # serve multiple customers one after another.
```
